

MOBILE OFFSHORE PRODUCTION UNIT

(2009 - 2011)

LOCATION

Offshore Nigeria

SCOPE

- Supply and installation of all controls, electrical and instrumentation, emergency power generation and power distribution aboard the client's Mobile Offshore Production Unit (MOPU)
- Project management, system design, procurement, fabrication, field construction and commissioning

PROJECT OVERVIEW

The client was in the development stage of the EBOK field, located offshore Nigeria. The project involved the design of the client's production and storage facilities in the area, including a wellhead conductor structure and a jack-up MOPU.

Tarpon was the turnkey supplier for all controls, electrical and instrumentation, emergency power generation and total power distribution on the MOPU, which is capable of sea water injection, gas lift, produced water treatment and receiving drilling formation fluids.

Tarpon's technicians supervised and lead the installation from two locations in Texas, USA, and executed final construction activities en route to the production field. Tarpon also supervised the commissioning activities upon arrival to the final destination.
